

YOU SAY POTATO

We say food for thought

It's not just a potato. It's an experiment. All a young scientist needs to add is a nail, some copper wire and a hunger for learning and you've got the beginnings of a future energy source.

Even this simple experiment offers the chance for discovery, imagination and ingenuity. It's just one of a wide range of experiments you might see at two of the upcoming science fairs sponsored by the Synopsys Outreach Foundation.

At the Synopsys Outreach Foundation we are proud to have supported over 500,000 young scientists through our science fairs. Come join us as we see what the next generation of scientists is cooking up:
